

E3ZG series contributes to automation through its economic and excellent performance.

- Long sensing distance of 15 m for Through-beam Models, 4 m for Retro-reflective Models, and 1 m for Diffuse-reflective Models.
- Mechanical axis and optical axis offset of less than $\pm 2.5^\circ$ simplifies optical axis adjustment.
- High stability with unique algorithm that prevents interference of external light.

For the most recent information on models that have been certified for safety standards, refer to your OMRON website.

Be sure to read *Safety Precautions* on page 8.

Features

Industry's Top-level Sensing Distance with Built-in Amplifier

A separately sold filter is available to prevent mutual interference for Through-beam Models with red lights sources and a sensing distance of 10 m. Reflective Models include functionality to prevent mutual interference (up to 2 sensors).

Long-distance, Through-beam Sensors with a detection distance of 15 m (response time: 1 ms) are also available.

Low-temperature Operation for Applications in Cold-storage Warehouses

A wider ambient operating range from -40 to 55°C (main models with connectors). We also provide Sensor I/O Connectors with PUR Cables for high resistance to cold environments.

Improved Matching of Optical Axis and Mechanical Axis for Through-beam Models and Retro-reflective Models

The offset between the optical axis and the mechanical axis is kept within $\pm 2.5^\circ$, so the optical axis can be accurately set simply by mounting the Sensor according to the mechanical axis.

The receiver will always be in the range of light diffusion.

Sensor Protection against Incorrect Wiring

The Sensor includes output reverse polarity protection.
(A diode to protect against reverse polarity is added to the output line.)

Protection for NPN output models

Complete Compliance with the EU's RoHS Directive

Lead, mercury, cadmium hexachrome, polybrominated biphenyl (PBB), and polybrominated diphenyl ether (PBDE) have all been eliminated. Also, burnable polyethylene packaging has been used.

2. For details, refer to Reflectors on the E39-L/E39-S/E39-R information available on the OMRON website.

* Values in parentheses indicates the minimum required distance between the Sensor and Reflector.

Mutual Interference Protection Filter

A Filter is not provided with the Sensor (for the through-beam E3ZG-T□□A-S). Order a Filter separately if required.

Sensing distance	Appearance/Dimensions	Model	Quantity	Remarks
3 m		E39-E11	Two sets each for the Emitter and Receiver (total of four pieces)	Can be used with the E3ZG-T□□A-S Through-beam models. The arrow indicates the direction of polarized light. Mutual inter- ference can be prevented by altering the di- rection of polarized light from or to adjacent Emitters and Receivers.

Note: The polarization directions of the Filters are offset by 90° to prevent interference. When you install the Emitter and Receiver, install them at the same angle to maintain this offset.

Mounting Brackets A Mounting Bracket is not enclosed with the Sensor. Order a Mounting Bracket separately if required.

Note: 1. When using Through-beam models, order one connector for the Receiver and one for the Emitter.

2. For details, refer to the *XS3* information available on the OMRON website.

*1. The Sensor can be used in low-temperature environments (–25°C to –40°C). Do not use the Sensor in locations that are subject to oil.

*2. The connector will not rotate after connecting.

*3. The cable is fixed at an angle of 180° from the sensor emitter/receiver surface.

* The ambient temperature range during operation for connector models depends on the model. For the E3ZG-T66-S/T86-S/R66-S/R86-S, the range is -40°C to 55°C. For the E3ZG-D66-S/D86-S/D67-S/D87-S, the range is -30°C to 55°C. For other connector models, the range is -25°C to -55°C.

The sensing distance for Retro-reflective Models (E3ZG-R66-S/R86-S) between -40°C to -25°C, however, will be as follows (not the values in the table):

With E39-R1S: 3 m (100 mm), With E39-R1: 2 m (100 mm).

Also, use the XS3F-M42□-4□□-L Sensor I/O Connector (PUR cable) for applications between -25°C to -40°C. (Refer to page 3.)

Safety Precautions

Refer to *Warranty and Limitations of Liability*.

**WARNING**

This product is not designed or rated for ensuring safety of persons either directly or indirectly. Do not use it for such purposes.

Precautions for Correct Use

Do not use the product in atmospheres or environments that exceed product ratings.

● Wiring

M8 Metal Connector

- Be sure to connect or disconnect the metal connector after turning OFF the Sensor.
- Hold the connector cover to connect or disconnect the metal connector.
- Secure the connector cover by hand. Do not use any pliers, otherwise the connector may be damaged.
- The proper tightening torque range is between 0.3 and 0.4 N·m. Be sure to tighten the connector securely, otherwise the specified degree of protection may not be maintained or the connector may be disconnected due to vibration.

● Mounting

Sensor Mounting

Use M3 screws to mount the sensor and tighten each screw to a maximum torque of 0.53 N·m.

Tolerance class IT16 applies to dimensions in this data sheet unless otherwise specified.
